Brainhack events convene researchers, engineers, data scientists or students to work on projects related to neurosciences. Similar to hackathons in the tech domains, attendees are invited to work/hack in different concrete ways (discussion, planning, coding, debugging, brainstorming etc) on on-going projects brought by other participants. The hacking integrates all levels of expertise and is to consider as a great opportunity to learn new methods, share and develop your skills, and initiate new collaborations. A training track is also included in Brainhack events.

After two successfull Brainhack Marseille events organized in 2019 and 2020, we are looking to organize the 2021 event in order to maximize interactions between Neuroschool labs. If you are interested in helping organize the 2021 edition of Brainhack Marseille (that will happen in cunjonction with the worldwide Brainhack global, late in the fall 2021), please get in touch with us : brainhack.marseille@gmail.com. No particular skills are required, you can be a senior researcher or a first year student, you just need to be motivated and have a bit of time !
